

## Cloudbreak rail camps

### Accommodation

The temporary accommodation camps were situated along the new Fortescue Metals Group rail line between Port Hedland and the Cloudbreak iron ore mine, 260 km south west of Port Hedland.

The camps provided temporary accommodation for the workforce constructing the rail line and sidings.

Decmil was contracted to install three rail camps (line camp 3, line camp 4 and line camp 6). Each camp consisted of 24 four-person accommodation units, wet and dry mess, administration office, communication rooms, laundry, administration office and first aid facilities.

The works were completed on a very tight construction schedule, due to the client requiring beds immediately to allow the completion of the rail line from Cloudbreak mine to Port Hedland port to continue.

The works were completed without injury and to the client's satisfaction.

CLIENT:	Fortescue Metals Group
LOCATION:	260 km south west of Port Hedland, Western Australia
EPCM:	NRW
CONTRACT VALUE:	\$9 million
START DATE:	February 2007
COMPLETION DATE:	June 2007
