

Ravensthorpe nickel project

Civil works - concrete

Decmil was commissioned by BHP Billiton to lay the foundations for the Ravensthorpe nickel project.

The total volume of concrete poured on this project was 10,000 cubic metres and involved complex excavation, formwork and concrete works for Process Acid Leach trains 1 and 2, Coldwell Foundations and various pipe-racks. As a variation to the contract, Decmil was also awarded the construction of the cooling towers.

No lost time injuries were recorded during the 150,000 man hours required to complete this project and all works were completed within the contracted period.
